

Simple POS Project Template

Point of Sale System Project Documentation

1. Project Information

Project Title	Broasted Chicken POS System
Version	1.0
Target Users	Cashier, Owner

2. Project Overview

Broasted Chicken POS System is a simple web-based application for tracking daily sales and managing inventory. It records transactions, generates basic sales reports, and identifies items that need restocking.

3. Project Objectives

- Track daily sales transactions.
- Monitor product inventory.
- Provide a simple, user-friendly interface for cashiers and the owner.

4. Scope of the Project

- Product management
- Sales tracking
- Inventory quantity tracking
- Basic sales reports
- Basic inventory alerts

5. User Roles

Role	Description	Main Access
Owner	Manages users, products, inventory, and reports.	Full system access
Cashier	Processes sales transactions.	Sales module only

6. Main Features

1. **Product Management:** Add, edit, delete, and search products.
2. **Sales Module:** Enter customer details, select products, set quantities, calculate totals, and update payment status.
3. **Inventory Module:** Monitor stock levels and update quantities after sales.
4. **Reports Module:** Generate daily, monthly, and yearly sales and inventory reports.
5. **User Management:** Create and manage owner and cashier accounts.

7. Non-Functional Requirements

- **Usability:** The system should be easy to use with minimal training. Also mobile friendly web interface.
- **Performance:** Sales transactions should be processed quickly.
- **Reliability:** Transaction and inventory records should be stored accurately.
- **Maintainability:** The system should support future updates and improvements.

8. Proposed Screens

- Dashboard
- Product Management
- Sales Transaction
- Inventory Report
- Sales Report
- User Management

9. Sample Transaction Flow

1. Cashier enters the customer details, product, and quantity.
2. System displays the product details, price, total amount, and payment status.
3. Cashier marks the sale as paid or pending.
4. Customer pays the required amount, if applicable.
5. Cashier updates the payment status.
6. System records the transaction and updates inventory.
7. System displays pending payments and low-stock items.
